

KiWi 280 Panoramic Tripod Head

The World's Leading Provider of Photographic VR Solutions for the Internet™

The KiWi™280 is the ideal companion product for the popular Kodak DC280 Zoom digital camera. Now you can easily and affordably create high-quality, professional photographic VR panoramas.

The KiWi 280 works with the leading Photographic VR applications such as those from Apple, MGI, VR Toolbox and others. Create panoramas that are viewable with QuickTime VR, IVR, and Java technologies all with the same panoramic tripod head.

The KiWi 280 comes with the tripod head, a 2-axis bubble level, a camera slider/positioner, a captive attachment knob and a 18 position detent disc.

The KiWi 280 has a mounting location to accommodate the standard lens setting. There is no need to figure out the nodal point as we've done that for you. There is also a slot that will let you position the camera anywhere along the bracket to support any other lenses you desire. Additional detent discs (2 thru 22) are available.

The KiWi 280 can be purchased separately or in affordable bundle configurations with stitching software, utilities or transport cases. Examples include, but are not limited to, the Apple QuickTime VR Authoring Studio, MGI PhotoVista and VR PanoWorx/VR Worx from VR Toolbox. Optional QuickTilt micro-leveling heads, tripods, Pelican transport cases and other accessories are also available.
