

QuickPan™ Spherical Panoramic Tripod Head

The World's Leading Provider of Photographic VR Solutions for the Internet™

The QuickPan™ Spherical Panoramic Tripod Head enables quick and accurate single or multi-row photography through a unique adjustable friction mechanism. A friction clutch, similar to a hinged laptop computer screen, keeps the camera arm from falling in an uncontrolled manner. Just loosen the knob and rotate the arm to the desired position. The mechanism rotates the camera while keeping the center of the lens fixed around both axes of rotation, a requirement for seamless spherical photographic panoramas.

The QPS-1 will work with current and future multi-row stitching applications. Great examples of these applications are the freeware programs developed by Professor Helmut Dersch. With his utility programs, **PT Stitcher**; a high quality, simple to use, all format stitching software, **Panorama Tools**; a Photoshop plug-in for panorama creation, editing and remapping and **PT Viewer**; a high quality spherical viewer, with standalone and java versions for many platforms. With these programs you can create wide field-of-view images that can be viewed with a variety of plug-ins and viewers.

More information can be found at <http://www.fh-firtwangen.de/~dercsh/>.

QuickPan™ Spherical

(QPS-1)

- ✓ **Modular** Modular construction for easy assembly and transport
- ✓ **Design** Ability to create accurate single or multi-row panoramas
- ✓ **Versatility** Can support a wide range of cameras and lenses
- ✓ **Guaranteed** One-year limited warranty, on parts and workmanship
- ✓ **Level Indicator** Twin axis bubble level
- ✓ **Flexible** Easy to adjust built-in micro-leveler
- ✓ **Click Stops** 6, 8, 10, 12, and 14 positions
